Security Integration - more info

Hi {{first_name}},

Thanks for your interest.

The core of our partner program is simple: we give you a proven, in-demand product to add to your portfolio. Your clients get an affordable, best-in-class drone detection system.

We have two simple ways to work together:

1. **Reseller Program:** You manage the client relationship and billing, and you receive our highest partner margin. We provide all the marketing materials and technical support.
2. **Referral Program:** A simple, no-effort option. You make the introduction, and we pay a referral fee when the deal closes.

Whichever you choose, you'll be offering a product with features that sell themselves:

- **Live Detection Map:** A 24/7, real-time map to monitor the exact movements of all detected drones and their pilots within a wide area .
- **Automated, Actionable Alerts:** The moment a drone is detected, your client's team receives the location of both the drone and its pilot.
- **Historical Replay & Evidence:** The system logs all drone activity for incident reporting or as a legal record.
- **Easy & Scalable Hardware:** Our simple receiver installs in minutes. You can easily add more units to scale coverage from a single facility to entire regions.
- **Affordable & Cloud-Based:** We use a simple annual subscription model, making this an easy "yes" for your clients compared to expensive upfront alternatives..

Are you available for a 15-minute call next week? I can run you through a live demo of the platform and walk you through the partner margins. Here is my calendar link --> {calendar link of persona}

Best regards,
Andrew

SecurityIntegration - video demo

Hi {{first_name}},

Thanks for your interest. Happy to provide more specifics.

Honestly, the best way to see the platform's features, from the live map to the pilot-location alerts—is to see them in action. This is the same demo you can share with your clients.

This 2-minute video gives a complete overview:

https://www.youtube.com/watch?v=fO8_EOUrSfg

This is the video that shows the setup process:

<https://youtu.be/9ayeUjYJhal?si=VYxgpMUDEvaFJBG6>

This is a solution you can add to your portfolio today. We offer two partner tracks: a full Reseller option with high margins, or a simple Referral program for a finder's fee.

It is a scalable way for you to add a new, recurring revenue stream by solving a problem your clients are facing right now.

If the video sparks your interest, just let me know. We can schedule 15 minutes for a live demo and to discuss our partner program. Here is our calendar link -> {calendarLink}

Best regards,
Amy

Airports more info

Hi {{first_name}},

Thanks for your interest.

The core concept is simple. Providing the real time location of the drone and the pilot. But the platform's other features are what make it a complete tool for airport operations teams.

Here's more info on the key platform features:

- **Live Detection Map:** You get a 24/7, real-time map to monitor the exact movements of all detected drones and their pilots, providing detection ranges spanning 2-30km.
- **Customizable Alert Zones:** You can configure specific Reporting, Early Warning, and Perimeter alert zones to tailor your security response.
- **Automated, Actionable Alerts:** The moment a drone is detected, your team (and local law enforcement if desired) receives an immediate notification containing the "actionable intelligence" they need: the location of both the drone and its pilot.
- **Historical Flight Paths & Evidence:** The system logs all drone activity. You can analyze past incidents and use the data for FAA reporting or as a legal record.
- **Simple, Low-Profile Hardware:** This isn't a complex, bulky system. It's a small receiver unit that can be installed in minutes.

- **Cloud-Based & Zero Maintenance:** The receiver connects automatically to the cloud and requires no ongoing maintenance.

This combination of features provides a highly affordable way to turn your team into an active response unit, without the heavy capital investment of traditional systems.

Are you available for a 15-minute call next week? I'd love to run you through a live demo of the platform and answer any questions. Feel free to schedule a time that works for you here -> {calendarlink}

Best regards,

Airports - video demo

Hi {{first_name}},

Thanks for your interest. Happy to provide more specifics.

Honestly, the best way to see the platform's features, from the live map to the pilot-location alerts, is to see them in action.

This 2-minute video gives a complete overview:
https://www.youtube.com/watch?v=fO8_EOUrSfg

You'll see it turns your operations team from passive observers into an active response unit, giving them the evidence needed to de-escalate a situation by engaging the pilot directly.

If the video sparks your interest, I'd be happy to schedule 15 minutes for a live demo and to answer your questions. Feel free to schedule a time that works for you here -> {{calendar link}}

Best regards,

Police departments - video demo

Hi {{first_name}},

Thanks for getting back to me. Honestly, the fastest way to see how AirWarden works — the 5-minute setup, the live pilot tracking, all of it — is just to watch it in action.

2-minute demo video: https://www.youtube.com/watch?v=fO8_EOUrSfg&t=1s

You'll see exactly how we'd deploy this for {{company_name}} — whether that's permanent coverage, event security, multiple locations, or rapid deployment scenarios.

If it looks like a fit after watching, I'd be happy to schedule 15 minutes so we can answer your specific questions and give you a live demo. Feel free to select a time that works for you here -> {{calendar link}}

Best regards,

Events&Venues - More info

Hi {{first_name}},

Thanks for your interest.

While the core concept is simple—providing the pilot's real-time location, the platform's other features are what make it a complete tool for event management teams.

Here's more info on the key platform features:

- **Live Detection Map:** You get a 24/7, real-time map to monitor the exact movements of all detected drones and their pilots, providing detection ranges spanning 2-30km.
- **Automated, Actionable Alerts:** The moment a drone is detected, your team (and local law enforcement if desired) receives an immediate notification containing the "actionable intelligence" they need: the location of both the drone and its pilot.
- **Customizable Alert Zones:** You can configure specific Reporting, Early Warning, and Perimeter alert zones to tailor your security response.
- **Historical Replay & Evidence:** The system logs all drone activity. You can analyze past incidents, replay them, and use the data for FAA reporting or as a legal record.
- **Simple, Low-Profile Hardware:** This isn't a complex, bulky system. It's a small receiver unit that can be installed in minutes.
- **Cloud-Based & Zero Maintenance:** The receiver connects automatically to the cloud and requires no ongoing maintenance.

This combination of features provides a highly affordable way to turn your team into an active response unit, without the heavy capital investment of traditional systems.

Are you available for a 15-minute call next week? I can run you through a live demo of the platform and answer any questions. Feel free to schedule a time that works for you here -> {{calendar link}}

Best regards,

Farms - More Info

Hi {{first_name}},

Thanks for your interest.

Here's more info on the key platform features:

1. **Live Detection Map:** You get a 24/7, real-time map to monitor the exact movements of all detected drones and their pilots, providing detection ranges spanning 2-30km.
2. **Automated, Actionable Alerts:** The moment a drone is detected, your team (and local law enforcement if desired) receives an immediate notification containing the "actionable intelligence" they need: the location of both the drone and its pilot
3. **Historical Replay & Evidence:** The system logs all drone activity. You can analyze past incidents, replay them, and use the data for FAA reporting or as a legal record.
4. **Simple, Low-Profile Hardware:** This isn't a complex, bulky system. It's a small receiver unit that can be installed in minutes.

Here is a quote from our a **large CA-base cattle farm** where AirWarden was recently deployed:

--

"As a large-scale cattle operation, our top priority is the safety of our livestock and team. Low-flying activist drones spook our cattle, risking dangerous stampedes, animal injuries, and property damage while threatening our staff on the ground.

Implementing AeroDefense's AirWarden Essentials has given us the critical situational awareness we need. The system provides an early warning to detect airborne threats before they cause chaos, protecting our herd, staff, and livelihood. AirWarden allows us to collaborate with local law enforcement in real time and automatically compiles the digital evidence needed for prosecution. Backed by second-to-none customer support, AirWarden is indispensable for our security and peace of mind."

--

I'd be happy to show you the platform live and answer any questions you might have. Feel free to select a time for a chat that works for you --> {calendarLink}
